Environmental Policy & Commitment

Environmental sensitivity and responsibility are top priorities at MHCS, and this facility exceeds all local, state and EPA standards. Because we understand the importance of reducing waste, MHCS runs a closed loop system where the water used during processing is returned directly to the chrome tank—completely eliminating wastewater. Our state-of-the-art air pollution prevention system removes any pollutants from the air and exceeds the air quality standards set by the EPA.

Air Permit

Texas Commission on Environmental Quality
Permit Number: 38293

Hazardous Waste Disposal and Documentation

Any hazardous waste created by MHCS is handled by the best in the industry. The outside vendor responsible for disposal provides the best-in-class Environmental Management System (EMS) that conforms to the ISO 14001 standards of excellence and ISO 9001 quality certification at our oil re-refineries. All copies of the waste manifests are kept on file in the office. These copies are never destroyed.

MHCS works closely with Texas Commission on Environmental Quality (TCEQ) to comply with all environmental standards and provides all required documentation. A responsible waste stream program is in place and this stream is documented to the standards required by TCEQ.
